

# Performance Analyzer

Halcyon Performance Analyzer provides accurate and up-to-the-minute performance statistics and trends. Advanced design techniques are utilized so as to reduce the impact on system resources.

Any number of IBM i servers can be monitored - you can even monitor each server during different time periods and record performances at different snapshot intervals if required.

Performance alerts can be generated if utilization exceeds pre-defined thresholds.

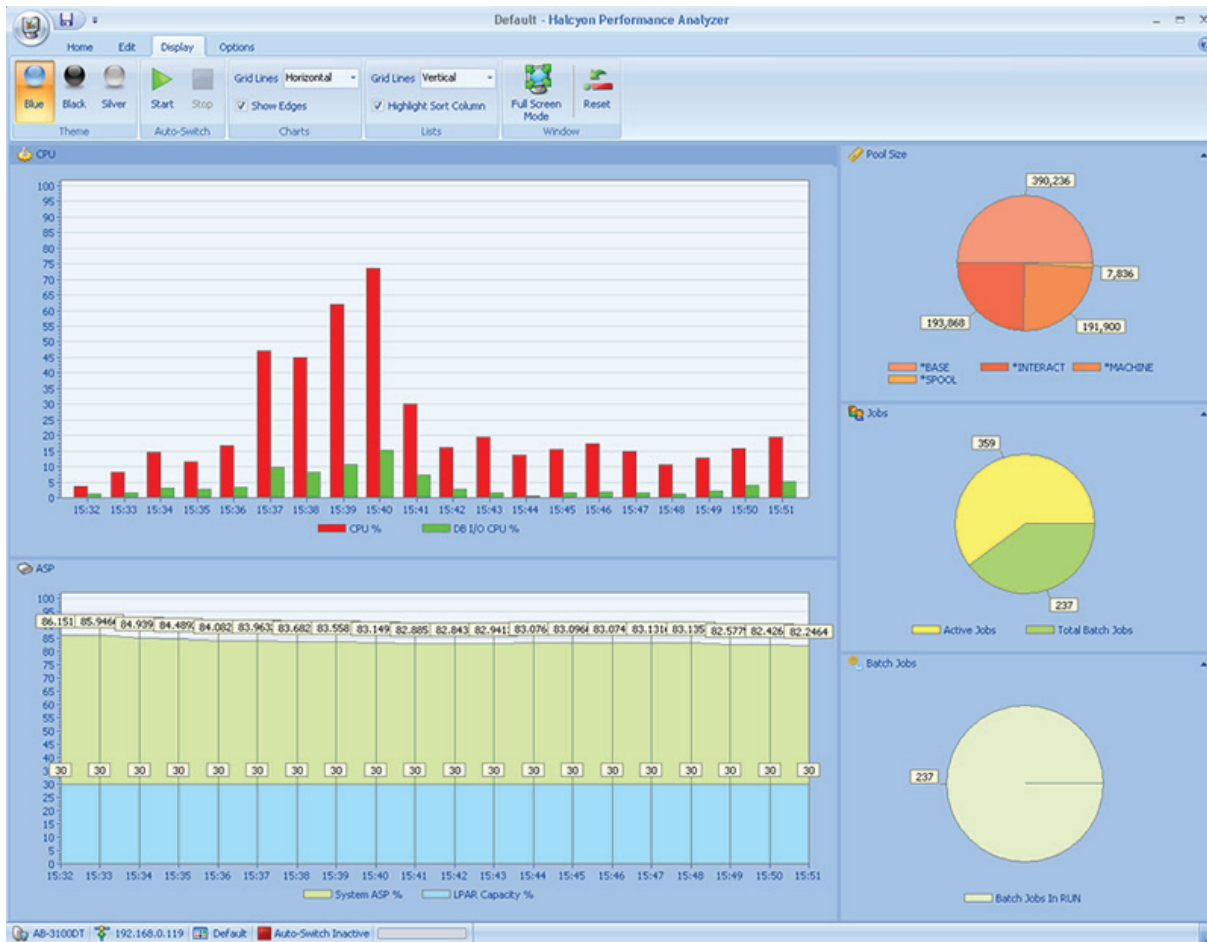

The report wizard provided allows you to build tailored reports to suit your needs.

## Features

- Monitors unlimited number of IBM i<sup>®</sup> servers
- Displays real-time information
- Provides long-term trend analysis
- Multiple alert actions possible if performance thresholds are breached
- Monitors system performance, jobs and pools
- Create your own tailored performance and service level reports
- Reports can be saved as HTML documents
- Fast, efficient and accurate
- Easy-to-use with minimal setup

## Benefits

- A carefully designed user-interface provides meaningful information that can be quickly retrieved and understood
- Performance statistics for many displays are shown with both graphical and tabular displays so that exact information is quickly and easily discernable
- Quickly identify resource grabbing jobs and/or users and take prompt, corrective action or let the system automatically resolve the situation
- Fully customizable Performance Viewer allows you to choose the colors for text and graphical displays
- Build your own reports or adapt the shipped example reports. Display graphs, tabular data or a mixture of both
- Use run-time substitution variables such as date and time when compiling the reports
- Save performance reports and HTML documents and publish them over your Intranet
