

Spooled File Manager

Halcyon's Spooled File Manager provides the perfect solution to spooled file distribution and archiving.

Comprehensive, real-time, spooled file monitoring and filtering options can automatically override spooled file attributes without any need for program changes.

Features

- Archive and restore individual spooled file entries or entire output queues
- Compress archived output queues to free disk space
- Automatic spooled file distribution based on spooled file name, user name, user data, form type, job name and report titles
- Copy spooled files and override any attributes
- Send spooled files to any local or remote output queue
- Requires no program changes
- Export spooled files as PDF attachments or embody small printouts within the email itself
- Email reports to ad hoc email addresses or addresses stored in either Microsoft® Outlook or Lotus Notes®

Benefits

- Never have to re-run a job again just because a user loses their printout. By saving spooled file entries on near-line or offline storage, it is always possible to restore individual spooled file entries for re-printing
- Forget about program changes when determining who gets which printout - everything is handled automatically
- Accommodate users' requests for changes to report distribution with ease
- Improve system performance by archiving or deleting old spooled files still deemed 'active' by the system
- Reduce paper wastage by printing only those reports that are necessary - many reports are only needed for archive purposes
- Free up disk space by not having to retain spooled files directly on the system
- Automatically email reports to users for speed of distribution
