

# Halcyon inactivity manager

The Halcyon Screen Inactivity Manager closes a system security loophole and helps to prevent unauthorised users tampering with company data.

These days users are called upon to do more tasks with greater speed and very often they get called away from their screens at short notice. Others simply forget to sign off when going to lunch or taking a coffee break.

As a consequence, your users are leaving the door wide open to potential security breaches and your systems are at risk from unauthorised data access, or worse, data sabotage.

**Prevent** unauthorised users from gaining access to business critical, confidential or sensitive information.

**Lock down** your systems to protect vital company data from corrupt or disgruntled employees.

**Data sabotage** is on the increase and can have far-reaching and, in some cases, quite devastating effects on any size of company.

**Flexible** and comprehensive actions can be automatically activated if screens are left signed on.

**Be alerted** to the fact that screens have been left signed on without user activity after any pre-defined period of time.

**User or program** exceptions can be set up so that vital screens are not deactivated.

**Screen savers**, with optional additional password security, can be activated - even on dumb, green-screen, terminals.

**Interfaces** with the Halcyon Message Communicator so that you may be alerted immediately to any security breaches out of hours.

**No longer** be restricted to the global QINACTLVL settings

**Take action sooner** than was previously possible to prevent data tampering

**Auditors** will be satisfied to know that you have taken action to close this obvious security loophole.

*"Halcyon Software deliver easy-to-use and reliable software which, after a while, you wonder how you ever lived without."*

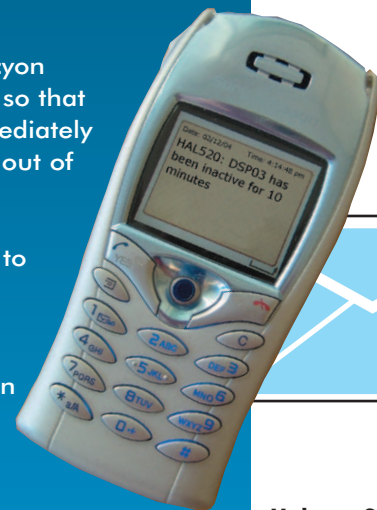

*We have found both the Restricted Tasks Manager and the Halcyon Message Manager invaluable and the Halcyon Screen Inactivity Manger is proving to be no exception.*

*As a global company we find that our Far East & European users inadvertently remain connected causing errors during the overnight processing. Now there is no room for human error, we rely on Inactivity Manager to secure our systems."*

## features

- Automatically monitor to ensure that screens are not left signed on for long periods without activity.
- Monitoring can be set for any length of inactivity from 1 minute upwards.
- Variable options allow different users, programs or jobs to be monitored for different lengths of inactivity.
- Exceptions can be made so that certain users, jobs or screens can be exempted from the Halcyon Screen Inactivity Manager.
- Signed on sessions without activity can be automatically disconnected or ended after a certain period of time.
- Automatic screen savers can be activated - even on dumb terminals - if users leave their screens signed on.
- Additional passwords, held in an encrypted file on the system, can be defined to unlock the screen saver to resume normal working.
- Interfaces with the Halcyon Message Communicator to allow notification of security breaches out of hours by email or by sending text messages to mobile phones or pagers.
- Simple installation and setup lets you have the software up and running in minutes.
