

# Halcyon performance manager

The Halcyon Performance Manager provides accurate and up-to-the-minute performance statistics and trends. By using advanced design techniques, you will notice very little impact on system resources.

Any number of iSeries servers can be monitored - you can even monitor each server during different time periods and record performance at different snapshot intervals if required.

Performance alerts can be generated if utilisation exceeds pre-defined thresholds.

The Halcyon Report Wizard provided allows you to build tailored reports to suit your needs.

**A carefully designed** user-interface provides meaningful information that can be quickly retrieved and easily understood.

**Performance statistics** for many displays are shown with both graphical and tabular displays so that exact information is quickly and easily discernable.

**Quickly identify** resource-grabbing jobs and/or users and take prompt, corrective action or let the system automatically resolve the situation.

**The Performance Viewer** is fully customisable and you can choose the colours for both text and graphical displays.

**Build your own reports**, or adapt the shipped example reports, with the Halcyon Report Wizard included with the software. Choose whether to display graphs or tabular data only - or use a mixture of both.

**Use run-time substitution** variables such as date and time, when running the reports.

**Save your** performance reports as HTML documents for publishing over your intranet or the Internet.

*"We have found Halcyon's Performance Manager to be an invaluable tool for system monitoring in a multi iSeries environment."*

*Statistical analysis and Service Level Agreement reporting has been simplified, enabling us to produce reports at our clients' request.*

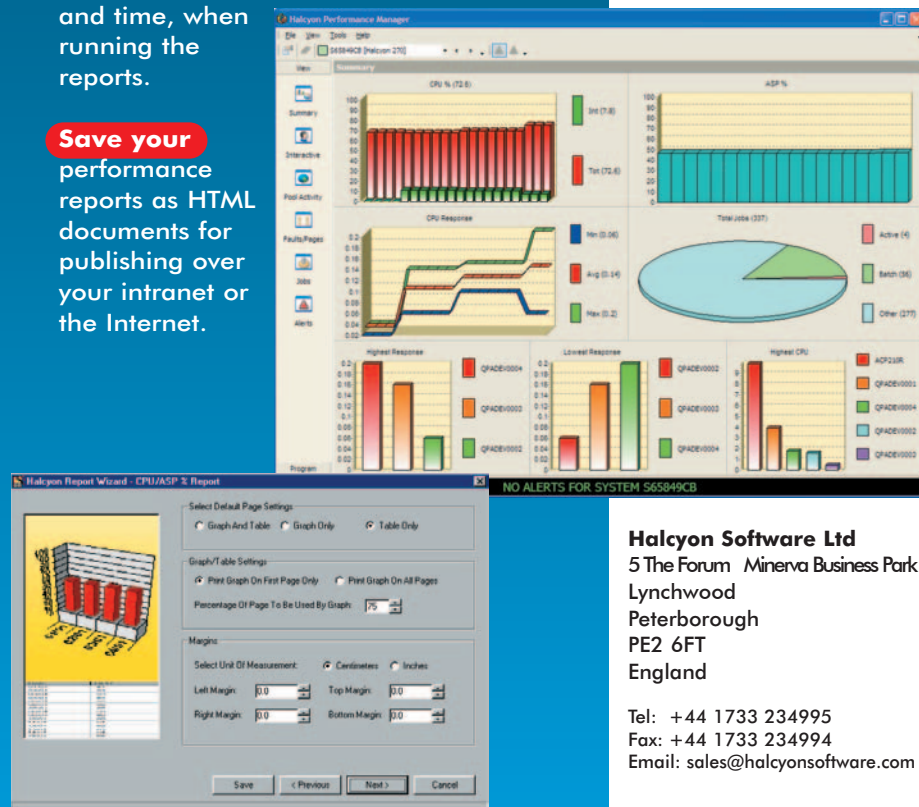

*We can say that Halcyon's technical support and after sales service can only be described as exemplary"*

## features

- Very easy-to-use with minimal setup
- Fast, efficient and accurate
- Unnoticeable impact on system resource when gathering data
- Monitors unlimited number of iSeries servers
- Displays real-time information
- Provides long-term trend analysis
- Multiple alert actions possible if performance thresholds are breached
- Monitors system performance, jobs and pools
- Fully customisable
- Halcyon Report Wizard is included for you to create your own tailored performance and service level reports
- Substitution variables, such as date and time, can be used when printing
- Reports can be saved as HTML documents
- Sets of reports can be saved in different folders for running different reports for various company divisions - or even for different companies
- Interfaces with the Halcyon Message Communicator and Halcyon Enterprise Console
